

Carriage Rollers

Carriage Rollers - Carriage rollers are particularly designed bearings that are utilized on lift masts to be able to help them operate in tough environmental surroundings. Lift masts are normally subjected to shocks, oscillations, high dynamic and vibrations and static loads. This apparatus is regularly exposed to environmental influences like for instance dust, cold, heat, moisture, contamination and aggressive ambient air. Therefore, the guidance arrangements of lift masts have to be specifically strong and have a certain high load carrying capacity.

To help compete in many various environmental conditions, carriage rollers were designed for a lot of lift masts. While having the ability to deal with a particularly high load carrying capacity, these bearings provided a cost-effective operational security for the lift masts' guidance arrangements.
