The U.S. lift Truck division situated in Cleveland has a professional team knowledgeable in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial home-based lift truck marketplace was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. began to import assembled lift trucks as part of a national machinery expansion project. Initial sales of this industrialized equipment focused on large business communities, the armed services and on state-run corporations. This ultimately led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division commenced business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck production plant was successfully completed. Continuous technical instruction grew to become the new focus for improving quality and product development.

Daewoo began the first domestic lift truck business in 1967, and quickly gained a massive 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's advanced technological improvements combined with sales success placed them in a position of significant expansion of their forklift operations.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint enterprise project to respond to competitive pressures in the US materials handling market. This endeavor greatly expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a modern plant which helped launch the company for the fabrication of high added-value goods suited for export. In 1993, the company had a global sales network and started exporting versions they had established through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion possibilities into international markets.
