

Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is a device made out of top quality materials designed to withstand the most challenging procedures and work environments. This piece of equipment could enable drivers to operate the blades hydraulically without leaving the seat. Side shifting models have the added ability to laterally position the entire load or the arms so as to facilitate more exact carrying and position in a faster and much more effective manner.

The unique blade pocket design could enable the person operating it to be able to securely swing the unit's forks without any worry of destroying the positioning cylinders. This could allow the worker the alternative to either execute simultaneous or independent blade movement, dependent upon the requirements of the job. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into blade positioners on available units.
