

Drum Clamps

Drum Clamp - Forklifts are designed to deal with moving, lifting and storing pallets. For businesses which handle products in drums, you should use an attachment to be able to store, move and lift them. There are numerous drum forklift attachments which you can get for all your drum moving, lifting and storing requirements. These attachments are specially designed so as to deal with drum containers - hence there is no risk of damage to the product or drum container when they are lifted, stored or moved.

Drum Positioner And Grab

The drum positioner is presented in three and four tine designs. They are operational for the unloading and loading of drums off vehicles, drum stands and racks. This accessory is fully automatic, hence allowing the individual operating it to be able to operate all from the comfort of the forklift seat. Able to move steel, large and extra large plastic drums, its capacity is 210 liters. This particular attachment is utilized for drum pyramid stacking.

The drum grab is fork mounted and is designed with the sole purpose of handling steel drums which have rolling hoops. Although the reason for the design was to deal with steel drums with rolling hoops, the drum grab can accommodate the transporting of extra large and large plastic drums. Drum capacity maximum is 210 liters for steel drums with rolling hoops and 220 liters for plastic drums.

The Rotator

The drum rotator is actually a forklift attachment that mounts on to the forks themselves. The objective of the drum rotator is to be able to pick up the drum and turn it upside down. The drum fits in to the rotator utilizing a steel clamp that fits over the middle of the drum. The rotation is done by either a crank handle or a continuous loop chain. The crank handle is for operations which occur beneath shoulder level. For operations that must happen over shoulder level, the continuous loop chain will be used.

The drum tines are carriage mounted or simple fork accessories. They are utilized for stacking and unstacking 210-liter metal drums. Stacking involves nothing intricate, merely easy horizontal placement of the drums. The carriage-mounted accessories lessen the load center of the drums.

Automatic Tongs

Drum tongs are obtainable in semi-automatic and automatic models. They are used in the tight head or open topped steel drum styles. The drum forceps can be attached in a few ways to the forklift. One way is to attach them underneath a fork-mounted hook. One more way is to attach them to a fork-mounted jib or a carriage mounted jib. Either the automatic and semi-automatic have a drum capacity of 210 liters. With the automatic, there is no need for the person operating it to ever leave the seat of the forklift.

Rim Grip Handler

Whenever drums need storage with inadequate spacing available, the Rim Grip Drum Handler is the best choice in drum forklift attachments. This attachment will work for both the 210 L drums as well as 120 L drums. The Rim Grip Handler operates by using metal jaws to be able to grab the edge of the drum. It lifts the drum and puts it down without needing any room between all the drums. The typical unit used in the trade is a zinc-plated handler, even if, this particular attachment is obtainable in stainless steel for the food and drink industry.
